

# RIVERVIEW HIGH SCHOOL

**In the Curie Health Sciences Learning Community**, students engage in learning activities that involve the psychological and physical well-being of those living within our community. Students are introduced to a variety of careers within the health field by voluntarily participating in such activities as CPR/First Aid classes, job-shadowing, internships, and AHEC (Gulf Coast South Area Health Education Center). If interested, Curie students may become certified nursing assistants and graduates of both Riverview High School and Sarasota County Technical Institute's Practical Nursing Program. According to Riverview student Sara Hackbarth (Class of 2007), *"The practical nursing (P.N.) program is a fantastic program providing incredible experiences. It was an amazing opportunity that opened many doors to my future. I am going to further my education by going to college (if not for pre-med) to receive my R.N. and a master's degree while working in the medical field."*

*"Achieving success in any health-related field requires a strong academic foundation in science."*

Riverview offers several superior preparatory science courses and pathways. For example:

Nuclear Radiation    Anatomy/Physiology    Chemistry II (Forensics)

CTE Pathway

Practical Nursing

## Highlights include:

- Courses for students who are interested in a career that provides clinical (medical) and/or counseling services to others
- Core subjects that focus on clinical, biological and psychological science with special emphasis on application of subject knowledge in areas such as radiology, respiratory technology, pharmacy, chiropractic medicine, and veterinarian sciences
- Content and activities that appeal to students who want to care for people or animals, and who are interested in science, medicine, health care environments, child development, and/or family and social services
